

The Notion API endpoint to create a new database is:

POST <https://api.notion.com/v1/databases>

Request Body:

parent (object): Specifies the parent page where the database will be created.

Type: { type: "page_id", page_id: <parent_page_id> }

title (array): Array of rich text objects for the database title.

Example: [{ "type": "text", "text": { "content": "Database Title" } }]

is_inline (boolean, optional):

true to create an inline database block in the parent page.

Omitted or false to create a full-page database.

properties (object): Defines the schema for the database with property names and property types.

Each property includes key and type, e.g., title, rich_text, select, multi_select, date, etc.

Select and multi_select can include options with name and color.

Example Request Body:

```
json
{
  "parent": { "type": "page_id", "page_id": "your_parent_page_id" },
  "title": [
    { "type": "text", "text": { "content": "AI Side Hustle Projects" } }
  ],
  "is_inline": true,
  "properties": {
    "Idea Title": { "title": {} },
    "Description": { "rich_text": {} },
    "Status": {
      "select": {
        "options": [
          { "name": "Not Started", "color": "red" },
          { "name": "In Progress", "color": "yellow" },
          { "name": "Completed", "color": "green" }
        ]
      }
    }
  }
}
```

```
}  
},  
  "Due Date": { "date": {} }  
}  
}
```

Official Create Database API docs:

<https://developers.notion.com/reference/create-a-database>

Example usage and code snippets are available in the docs and community posts.

If you want, I can help you generate the exact JSON payload for your AI side hustle Notion template and sample code to call the API to create the database. Would you like that?
