

Alright, let's do this right. Tell me what exactly you want your script to do in Google Sheets.

Here are some examples people usually need:

🔥 Popular Google Sheets Script Ideas

1. Auto-sort rows whenever data is added
2. Send email alerts if a value is over a certain amount
3. Pull data from another sheet or spreadsheet
4. Create a timestamp when a row is edited
5. Create a custom menu in the toolbar (with buttons)
6. Import data from a website or API
7. Daily/weekly report sent to your email
8. Clean up duplicates or blank rows
9. Auto-fill a row when a certain condition is met
10. Track subscription due dates and send reminders

Pick one (or describe your own idea in plain English), and I'll write the exact code for you — ready to paste straight into your Google Sheets Script Editor.

Give me the job and I'll make the code.
